

Sales Tip: Silverline Diesel Performance Truck Exhausts Save at least 10% on Fuel Consumption!

At today's cost of diesel fuel, saving at least 10% on fuel consumption is a huge deal! In fact, recent real life reports from the street confirm fuel efficiency improvements of over 13%*.

Owners are reporting to us an average 2 mpg improvement after installing a Silverline Diesel single exhaust system. Using typical diesel fuel prices in the \$5.00 per gallon range, this translates to a savings of 4.1 cents for every mile driven!

Using this example, it will take only 16,000 miles of driving to recoup the investment of a typical 409 stainless system. Plus, improvements in horsepower and torque are immediate.

*Actual improvements will vary depending on specific vehicle configuration and other optional equipment installed
